

Propolis Platinum™

Essence From Nature

PROPOLIS PLATINUM
Nature's Gift to Mankind

Functions of Propolis Platinum

Propolis Platinum possesses rich bioflavonoid content. Bioflavonoids stimulate white blood cells that help to improve the body's immune system. Flavonoids of Propolis Platinum are plant compounds that have high quality antifungal, antibacterial, antiviral, antioxidant and anti-inflammatory properties.

Supercritical Field CO₂ Extraction

Liquid propolis is more beneficial than non-liquid form. Liquid propolis is capable of channelling direct to the stomach and intestines, which does not require the process of digestion. The liquid form of propolis is absorbed faster by our body to experience the benefits of propolis. Propolis Platinum is manufactured with advanced Supercritical Field CO₂ extraction in order to maintain its original content of bioflavonoids and provide excellent health benefits for the people.

New Zealand and Australia Propolis (Alcoholic Extraction)

Brazilian Propolis (Supercritical Field CO₂ Extraction)

China Propolis (Alcoholic Extraction)

Benefits of Propolis Platinum

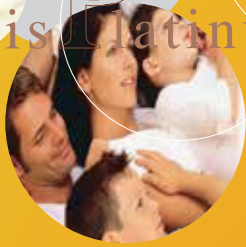

Propolis Platinum stimulates the production of antibodies that help strengthen the body's immune system. Propolis Platinum helps to ease sore and irritated throats. It acts to fight gum and teeth disorders. It helps to prevent colds, gastrointestinal infections and have many other uses. It also helps to improve from respiratory problems and assists in healing minor wounds when applied orally.

Propolis Platinum

Comments By Experts

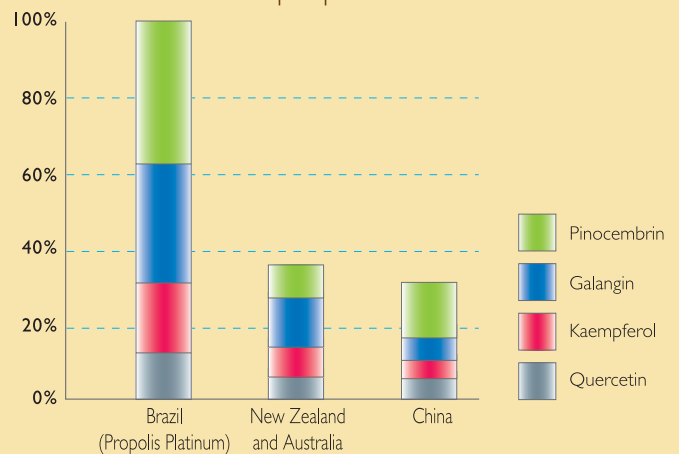

1. The most essential pharmacologically active constituents in propolis are the flavones, flavanols and flavanones (collectively called flavonoids), and including various phenolics and aromatics. Flavonoids are thought to account for much of the biological activity in propolis (Grange and Davey, 1990).
2. Humans mostly use propolis solely as therapeutic. Propolis including a number of its components exhibits a wide variety of biological and pharmacological activities. (Schmidt and Buchmann, 1992).
3. The concentrated flavonoids in propolis are powerful antioxidants and have been proven to be capable of scavenging free radicals and thus protecting lipids and other compounds such as vitamin C from being oxidised or destroyed (Popeskovic, et al, 1980).
4. Propolis is proven to stimulate various enzymes systems, cell metabolism, circulation and collagen formation, as well as improve the healing of wounds suffered from burns (Ghisalberti, 1979; Krell, 1996).
5. Japanese researchers have shown an extract of propolis in producing a macrophage activation phenomenon related to the immune system function in humans (Moriyasu, et al, 1993). Propolis activates immune cells that produce cytokines. The results help to explain the anti-tumour effect produced by propolis.

Why is it important to consume Propolis Platinum daily?

1. In our daily lives we are at risk of infections or being exposed to many types of diseases as we come into contact with other people and the polluted environment.
2. Propolis Platinum is plant based and functions as a natural antibiotic that does not produce any side effects as those by medical antibiotics. The flavonoids possessed by Propolis Platinum helps to combat infections and diseases in a safer and natural way.
3. Due to its antibacterial and antiseptic properties, regular use of Propolis Platinum helps the treatment of infirmity of human organism.

TLC (Thin Layer Chromatography) Analysis report on the content of Flavonoids of various propolis in the market

Identifying The Quality of Propolis

Propolis is produced in Brazil, China, Australia, Argentina, Chile, Uruguay, Mexico, U.S.A. and England. The quality of propolis depends on its country origin. Different colours of propolis also indicate its grades in quality. According to Dr. Kishita in his book titled 'The Wonder Treatment of Propolis' stated that, an analysis on the propolis of various countries revealed that propolis from Brazil, especially from the resins of Eucalyptus is the best quality.

Propolis comes in various colours such as brown, yellow, green, etc. that portray their quality. The best quality is the Brazilian green propolis, which has the richest plant life diversity in the world.
